Arman Abrahamyan

Offensive security student · CTF competitor · Yerevan, Armenia

armanabrahamyan8080@gmail.com · linkedin.com/in/armabrahamyan · github.com/ArmanAbr · armanabr.github.io

Offensive security student focused on Active Directory, web exploitation and privilege escalation. 2nd of 209 in Armenia's national student CTF, Team Armenia at ECSC 2026, 14 months as an offensive security intern at Hexens, and 30+ public writeups. Looking for penetration testing internships and junior roles.

COMPETITIONS

2nd of 209 - Students National Cyber Challenge 2026, Prequalification Sep 2026

- Individual jeopardy CTF run by ISAA on Hack The Box: 10 challenges across 7 categories in one 13-hour session, human-only (no AI assistants or automation).
- Solved all 10 (Web, Reversing, Pwn, Forensics, AI/ML, Crypto, OSINT) for 6,575 points and 3 first bloods.
- Qualified for the national team final, Nov 14, 2026.

Team Armenia - European Cybersecurity Challenge (ECSC) 2026, Bochum Oct 12-16, 2026

EXPERIENCE

Offensive Security Intern - Hexens 2024 - 2025 · Yerevan

- Exploited SQLi, XSS, LFI/RFI, CSRF, SSRF and IDOR by hand in Burp Suite across the full PortSwigger Web Security Academy path.
- Mapped and abused Active Directory attack paths: LDAP and BloodHound enumeration, credential abuse, lateral movement, token impersonation and ACL abuse.
- Escalated privileges on Linux and Windows hosts; wrote Python, Bash and PowerShell tooling to automate enumeration and parse scan output.

Software Engineering Intern - Database and Statistics Technology 2022 - 2023 · Remote

- Built internal business tools in VB.NET / .NET Framework.
- Designed MySQL schemas and wrote reporting and analytics queries.
- Tested and debugged REST endpoints in Postman; took part in code review and sprint planning.

PROJECTS

AD-Path-Finder Python

- A mini-BloodHound: maps AD rights (GenericAll, WriteDacl, ForceChangePassword, DCSync) into a weighted graph and runs Dijkstra from any user to Domain Admin, fewest abuse steps first.
- Flags quick wins (Kerberoastable, AS-REP roastable, unconstrained delegation); live LDAP collection via ldap3/impacket, Graphviz export, 18 offline tests.

SSTI-Exploiter Python

- Tells real template evaluation apart from reflection with randomized probes across six delimiter families, avoiding the false positives of naive 7*7 checks.
- Fingerprints 11 template engines and builds engine-specific RCE payloads, with a time-based fallback for blind targets and a vulnerable Flask lab for testing.

Sentinel Python

- Offline GTFOBins/HackTricks rule engine that ranks ready-to-run privesc vectors; an optional LLM layer re-prioritises and chains them.
- autopwn chains nmap, feroxbuster, nikto, enum4linux-ng and searchsploit into a foothold report; read-only by default, authorization-gated, 18 offline tests.

CERTIFICATIONS & PRACTICE

- **Ethical Hacker** - Cisco Networking Academy, Sep 2026
- **In progress:** HTB CPTS
- **HackTheBox:** Pro Hacker rank · 40+ machines · 130+ challenges · level 65+ (Master)

SKILLS

Offensive - Web application testing · Active Directory attacks (Kerberoasting, AS-REP roasting, ACL abuse, RBCD, DCSync) · Linux & Windows privilege escalation · Memory and log forensics

Tools - Burp Suite · Nmap · BloodHound · Impacket · NetExec · Evil-WinRM · Metasploit · Hashcat · Volatility · Wireshark · ffuf

Languages - Python · Bash · PowerShell · SQL · VB.NET · C++

EDUCATION

NPUA High School - Mathematics and Computer Science Sep 2025 - 2028 (expected)
